

Nikos Mavrapidis.

SOFTWARE ENGINEER · APPLIED AI & RETRIEVAL

Athens, Greece · Military service completed

mavrapidisnikolaos@gmail.com

nikosmav.github.io · github.com/NikosMav

linkedin.com/in/nikolaos-mavrapidis

Software engineer with production experience across embedded telecom (C/C++), Java product development, and test automation, and co-founder of Lope, an applied-AI recruiting product. Now focused on retrieval, evaluation, and LLM/RAG systems, with security as the edge. Known for owning work end-to-end: investigation, delivery, evidence, and handover.

EXPERIENCE

- Oct 2025—Sep 2026 **Co-founder** · Lope · concurrent startup work
- Built an AI product for recruiter search, candidate enrichment, evidence-backed ranking, and shortlist workflows, used in production by recruiting agencies.
 - Worked across product decisions, application engineering, retrieval systems, and production delivery; 98.7% enrichment success over ~3,000 profiles and 1,272 passing tests at handover.
- Nov 2025—Present **Test Automation Engineer** · SoftCom International · industrial software client
- Own and modernise UI and REST automation across Python, Robot Framework, reusable keyword libraries, dashboards, and result publishing.
 - Stabilise nightly CI and own high-impact defects — including memory leaks — from reproduction through validation and regression coverage.
 - Collaborate on-site with client developers and align defect evidence and delivery with release schedules.
- Jun 2025—Nov 2025 **Software Engineer · Java** · SoftCom International · industrial software client
- Delivered a product extension end-to-end across Java/Spring backend and UI, then modernised legacy modules through careful reverse-engineering.
 - Resolved high-priority defects and maintained delivery tooling across Jenkins and Artifactory.
- Dec 2023—Jun 2025 **Software Engineer · Embedded C/C++** · SoftCom International · telecom client
- Shipped a hitless software upgrade path that reduced planned service interruption from hundreds of milliseconds to zero.
 - Developed and hardened Linux-based network software across the full lifecycle—requirements, features, defect fixing, test planning, and maintenance—in C/C++, Scala, Bash, and Python.
 - Reverse-engineered third-party code to close compatibility gaps and add features; used networking tools for performance testing and protocol analysis.
 - Closed high-priority defects and completed the documentation, knowledge transfer, and handover for the work.

SELECTED PROJECTS

Lope · Startup · Co-founder · 2025—2026

A recruiter-first AI workspace that turns role briefs and candidate evidence into ranked, explainable shortlists — run in production with recruiting agencies, with 1,500+ interviews and ~800 AI-sourced candidates flowing through it. Worked across the whole platform — product, front end, back end, AI search, and infrastructure — as the most active contributor in both code repositories: the recruiter workspace, the row-level-security access model, quote-verified LLM skill matching in the ranking engine, and immutable releases on two production VMs.

Camelia Wellness · Client platform · Full-stack · 2025

A bilingual service and booking experience rebuilt around clearer journeys, discoverability, and operationally safe releases. Led UX and implementation across booking, SEO, responsive delivery, and versioned GCP/Cloudflare deployment with rollback.

Worthify · Team AI prototype · Machine learning

A used-car valuation product trained on more than 100,000 listings and designed to make model output useful to everyday buyers. Worked across data, modelling, evaluation, and the product surface. The final model reached R^2 0.97 and roughly 6% median absolute percentage error.

Adaptive Museum Experience · BSc thesis · Browser computer vision

A context-aware museum prototype that adapted content using browser-based visual interaction and was evaluated with 13 participants. Designed and built the experience end-to-end; 84.6% of participants reported feeling more knowledgeable after using it.

RETRIEVAL & AI R&D

Netflix Catalog Search · Lexical → semantic → hybrid → rerank

An offline catalog search that puts lexical, dense, hybrid, and two-stage retrieval side by side over the same corpus and measures each one. **nDCG@10 0.72 · Recall@10 0.78 · MRR 0.76**

News Evidence Retrieval · Passage retrieval & reproducible eval

Hybrid passage retrieval that surfaces supporting evidence for a claim over a news corpus — an evidence finder, deliberately not a fact-checker. **MRR 0.84 · Hit@1 0.78 · nDCG@5 0.63**

SKILLS

Applied AI & retrieval

LLM applications & RAG, Embeddings & vector search, Hybrid retrieval (RRF), Cross-encoder reranking, Recommenders & scikit-learn

Systems & product

C/C++, Java & Spring, TypeScript, React & Vite, Linux & networking

Quality & automation

Robot Framework, Selenium, Playwright, REST testing, Vitest

Delivery & data

Jenkins / GitLab / Azure, Docker & Kubernetes, PostgreSQL, GCP / AWS, Security foundations

EDUCATION

Oct 2017—Oct 2023

BSc in Informatics & Telecommunications · National and Kapodistrian University of Athens

Thesis: a web experience exploring ubiquitous computing, built for the department's Museum of IT & Telecommunications. [Read thesis](#)

CERTIFICATIONS & LEARNING

[Software Engineering Basics for Everyone](#) · IBM · edX · Nov 2023

[High-Dimensional Data Analysis](#) · HarvardX · edX · Oct 2023

[Data Visualization](#) · Coursera · Nov 2021

MPLS All-in-One: fundamentals, L2VPN, L3VPN, traffic engineering · Arash Deljoo · online course

Learn Python · Learn Node.js · Intro to Vite · Advanced JavaScript · Scrimba · May—Jun 2025

AWS Certified AI Practitioner · In progress

LLMs, embeddings, vector search & RAG · Ongoing practice

IBM Cybersecurity Analyst · In progress · ~halfway

Cisco Junior Cybersecurity Analyst · In progress · core modules complete

DevOps with AI (Decoding DevOps) · In progress

COMPETITIONS & COMMUNITY

1st Greek AI Hackathon · Athens Center for Entrepreneurship and Innovation · AUEB · Feb 2024

Student volunteer, MobileHCI 2023 · ACM SIGCHI · Sep 2023

Google Hash Code 2022 · Athens hub hosted by NTUA · Feb 2022

Hackathon 2022 · Team participant · Feb 2022

LANGUAGES

Greek Native · **English** Certificate of Proficiency · University of Michigan · **German B1** · ÖSD Zertifikat
